

RECTANGLE POP UP BOX

1. Cut out the template, score along the dotted lines and cut along the solid lines. If you are using the SVG version these will have been done for you.
2. Please note if you are using the stencil version, you will need to cut two of the templates. On one of the templates you do not need to score the long horizontal score line to create the back side.
3. Mountain fold along the red dotted lines and valley fold along the green dotted lines.

4. Attach the two pieces together using the tab. Fold up the box so the tab meets the other edge and secure with glue or tape to create your rectangle pop box.
