

SELF CLOSING BOX

1. Cut out the template, score along the dotted lines and cut along the solid lines. If you are using the SVG version these will have been done for you.
2. Valley fold along the green dotted lines and mountain fold along the red dotted lines.
3. Fold the template in half and stick the tab to the opposite edge. Open up the bottom of the box, fold in the tabs to form the base of the box and stick to close. The folds of the box will snap the opening shut when you push to close it.
